CASE STUDY

Tenmat save over £ 1,000 in the first year working in partnership with Agecko UK Ltd...

Tenmat specialise in the development of advanced materials and components for a range of industries including rail, automotive, aerospace and agriculture, to name a few. With over 100 years' experience and a diverse product range manufacturing over 200 bespoke products. It is no surprise that they are the leading innovators within their field.

Tenmat had a vision, their goal was to achieve 100% landfill diversion. Agecko were invited to conduct a detailed waste audit. Agecko used their expertise, knowledge and innovation to find a sustainable solution. With multiple waste streams and problematic waste, historically it was difficult to find an alternative solution to dispose of this waste. Particularly the fibre reinforced plastic, mixed dusts and contaminated plastic. Within just 6 months, Agecko were able to achieve this goal and as a company they are now 100% zero waste to landfill.

OUR SOLUTION

- A fresh approach and improved management system allowed Agecko to implement better segregation techniques and overall a well-managed working solution. Thus, resulting in a significant increase in environmental performance and cost savings.
- The mixed dust is now recovered as tumbler fines for road surfaces rather than processed within the general waste. Through various specialist processes the FRP (fibre reinforced plastic) is diverted from landfill and recovered to create energy. Contaminated plastic is now processed and recycled, promoting a circular economy.
- Additional to this, Agecko were able to eliminate the requirement of having expensive weekly skip movements for wood waste. A more efficient, organised solution was implemented, resulting in this wood being recycled back into a usable product for their processes. Thus, significantly reducing carbon emissions.
- Agecko implemented new containers and innovative solutions to massively reduce transport and disposal costs for their overall general waste. This has seen a staggering £29000 saving on their annual bill.
- Continuous improvements will be made throughout our partnership which will see more cost savings and increased efficiencies long term. This is closely monitored with Agecko's detailed bespoke monthly Key Performance Indicator (KPI) Reports.

Agecko offer bespoke waste management solutions based on innovation, cost reduction and efficiency.

Agecko will maximise your waste revenues, reduce costs, improve your green credentials and deliver a real difference to your bottom line.

On-going measurement and reporting, assisted by excellent customer service from our professional support team, Agecko becomes your personal 'waste management and recycling department.'
