

Vehicular Composites Group: Call for New Representatives

The Automotive Composites Group (Composites Leadership Forum Automotive Sector) has changed its remit within the main group to be inclusive of all ground-based transportation. Newly named Vehicular Composites Group (VCG), we would invite new representatives from the following UK transport sectors who will have a need for composite materials in their mid to long term future; whether that be for lightweighting or hydrogen storage.

If you work in the following sectors and would like to be part of this influential group, please contact Alan Banks (Chair of the Vehicular Composites Group) for more details (abanks2@ford.com).

- Automotive (Passenger car and Light Commercial Vehicles)
- Medium/Heavy Trucks
- Buses
- Off-highway and farm vehicles
- Defence
- Rail

The Composites Leadership Forum (CLF) is working to influence the Government and other bodies to bring together support for composites and ensure growth and industrial success for the UK.

The VCG aims to facilitate development of UK technology capability and supply chain capacity to deliver globally competitive, higher volume composite structures and components; working with Government and funding bodies to identify funding mechanisms to facilitate this.
