

SUSTAINABILITY AWARD: CIRCULARITY

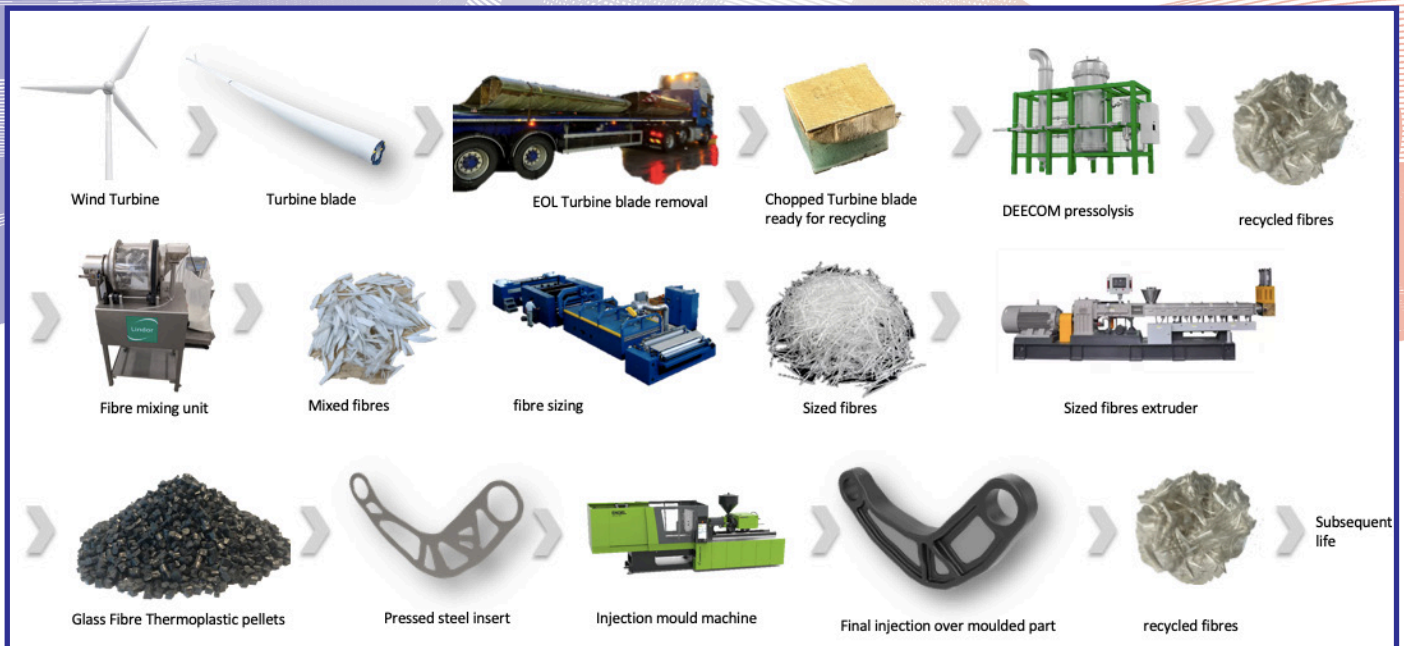

SHORTLISTED: Longworth & Partners

The EMPHASIZING project is Innovate UK SMART-funded from Oct 2022 – Sept 2024 to address the challenge of recycling GRP composite structures that are currently landfilled or incinerated and develop a viable value chain to exploit the resulting recyclate.

Although the project’s primary focus is wind turbine blades, automotive and marine parts are also being considered, processed and analysed.

EMPHASIZING benefits from a full supply chain consortium and demonstrates the circular economy concept by fabricating carefully selected, structural automotive end-products to be made from upcycled glass fibre materials.
