

**SUSTAINABILITY AWARD: NET-ZERO**  
**SHORTLISTED: SHD Composite Materials**

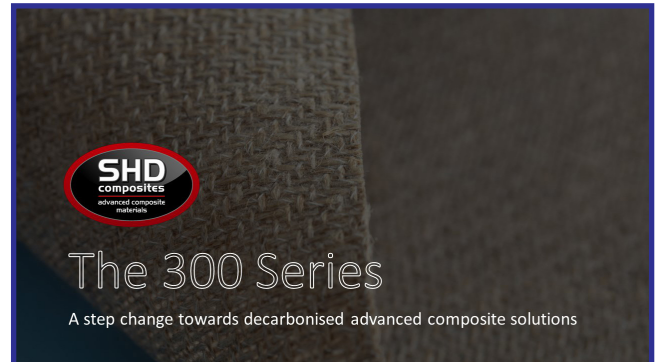

The SHD 300-Series resin systems have been developed to provide a step change towards decarbonised advanced composite solutions.

Change is never easy. Implementing change is even harder when still essentially delivering the same thing, high performance materials for lightweight structures.

SHD have enabled this change on the 300-Series through three primary innovations:

1. Raw materials – Novel chemistry and alternative biobased feedstocks in place of oil equivalents
2. Downstream Logistics – Frozen/chilled transportation and storage can be avoided
3. Optimisation of consumables – Packaging and backers have been significantly streamlined.
