

INNOVATION IN COMPOSITE MATERIALS AWARD

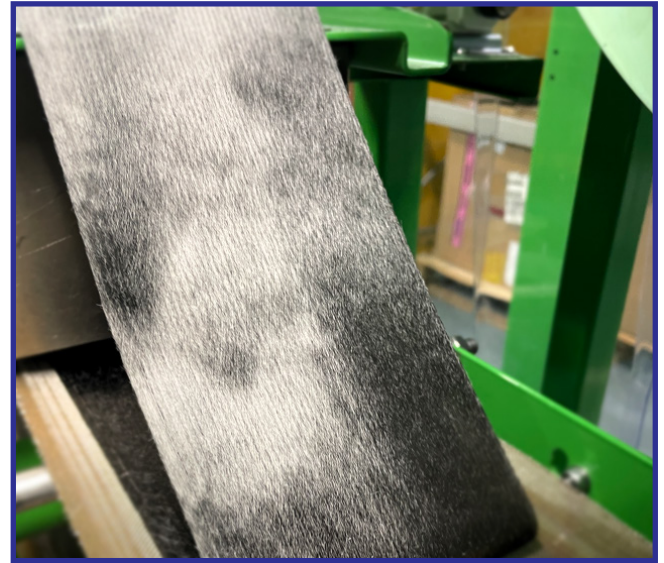

SHORTLISTED: Lineat and SHD Composite Materials

Lineat Composites and SHD Composite Materials Ltd have combined their expertise and capabilities in an innovative solution to create advanced aligned recycled carbon fibre pre-preg materials.

Lineat produced a new dry format of its aligned fibre material, stabilising it with a proprietary technology to make it spoolable.

SHD used their advanced pre-pregging machinery to feed and combine the aligned fibre tapes into a wider and thicker aligned fibre pre-preg material.

This opens up a new route for recycled carbon fibre pre-preg production at different thickness, width and with a variety of resin films to meet customer demands.
