

## INNOVATION IN COMPOSITE MATERIALS AWARD

### SHORTLISTED: PRF Composite Materials

RFA570 eXpress cure adhesive film is a unique product principally designed for use with PRF's RP570 and RP570 FR eXpress cure epoxy preregs, as an adhesive film for core bonding applications.

RFA570's innovative characteristics enable it to be cured in a press in 4 minutes at 140°C, thereby speeding up the processing of honeycomb sandwich panels, with either nomex or aluminium honeycomb.

Used with RP570/RP570 FR, RFA570 greatly increases the levels of productivity that composite manufacturers can achieve in creating complete components, thus increasing the capabilities of composites to be used in industries demanding high volume manufacturing of structural parts.
